Dr. Susanne Fleischer

Medical Voice Center

Hamburg, Germany

Program Description

Among phonosurgical procedures in patients with benign lesions of the larynx, office-based interventions, including laser surgery, have reached a level of high standard and are nowadays considered as the first-choice treatment for various diseases and disorders.

This hands-on training course will offer lectures about diagnostic and surgical techniques for various disorders of the larynx as well as video presentations of typical cases. All participants will have the opportunity to learn many 'hands-on' intervention techniques with flexible endoscopes as well as how to handle the instruments accordingly.

With over 20 years of experience performing office-based procedures by the faculty, this knowledge will be shared with the attendees during the practical course and show how one can perform these interventions. A special focus will be live case presentations. Explanation of tips and tricks as well as discussion of pitfalls and complications will complete the spectrum of topics.

Concept

The hands-on training course on office-based interventions for various benign mass lesions of the larynx will provide the opportunity to improve the skills of handling endoscopes and instruments in the larynx. Skills such as biopsies, injections as well as laser surgery with flexible endoscopes will be covered via live operations and hands-on training sessions.
